## A GRAMMAR, 心.

Tus history of the Hottentot race is intimately connected with the rise and progress of the Cape Colony. This people were the aboriginal inhabitants of the greater part of that portion of Southern Africa which is now subject to British rule, but have been deprived of their land, and gradually reduced in numbers by the rapid and irresistible advance of civilized man. Much valuable and interesting information respecting their character, manners, and customs, has already been collected in the books of travellers and in other works ; but, until very recently, their language has been a much neglected subject of enquiry. Its harsh and peculiar sounds have probably deterred many from grappling with its difficulties, and making it a field of philological research. Before the commencement of Christian Missions and the abolition of slavery, the aborigines were held in servitude and contempt by the Colonists, they were seldom regarded with philanthropy, and few efforts were made for their instruction and elevation. The very nature of their intercourse with the Colonists, forced upon them the language of the whites, and paved the way for the gradual extinction of their own. When the Missionary Societies of Europe turned their attention to South Africa, their agents found numbers of the Hottentots conversant with the Dutch language in which they commenced to communicate religious instruction to them. Wherever the native language still prevailed interpreters were employed, until the Missionaries had succeeded, not as has generally been the case with foreign Missions, in learning the language of the
aborigines, but in teaching them theirs. With reference to those Missions which have long been in operation among the Hottentots within the Colony, or those on its immediate border, the event has justified the course pursued: from a Hottentot a click is seldom heard.

A few Missionaries, however, have taken an interest in the Hottentot language, and have published several small works in it. These might have sufficed but for two reasons. First, Several tribes of the Hottentot race, and some others who speak the same language, are so remotely situated from the Colony, that it is highly probable a considerable time will elapse before they shall have formed a sufficient acquaintance with cither the Einglish or the Dutch language to enable them to dispense with their own, however certain its ultimate extinction may appear to be. For these it is necessary to provide translations of Scripture, in order to instruct them in the truths of Christianity. Secondly, It will be interesting to preserve some additional record of the language spoken by a people so peculiar and once numerous, as it may assist in tracing their descent, and removing the obscurity in which their origin is at present involved.

These two reasons have induced me to compile a sketch of the Grammar of the Namaqua Hottentot dialect, which will form a basis for more critical and philosophical research into its structure and general principles.

The following are the different dialects spoken by the several varicties of the Hottentot race:-

The Hotlentot proper, which was spoken by the tribes that inhabited the greater part of the Districts now comprised in the Cape Colony. 'This dialect is almost extinct. A few who are still conversant with it may be found in the back settlements, and along the Eastern fronticr. Two or three of the lepers at the Robben Island Establishment converse in it with fluency.

The Coranna, which is spoken by the tribes inhabiting the banks of the Orange River, and by others in the
vicinity of the Vaal and Modder Rivers, with a few stragglers who have branched off from these towards the interior.

The Namaqua, which is used by the tribes of Little and Great Namaqualand, and by the Berg Damaras. It has not yet been satisfactorily ascertained how these two races, so essentially different in many respects, have acquired the same language; the probability is that the Berg Damaras were formerly in a state of vassalage to the Hottentots.

The Bushman, which is spoken by numerous roving clans who inhabit the desert and mountainous tracts of the interior. Their clialect is, in its turn, subdivided into numerous brogues, some intelligible, and others unintelligible, to the other varieties of the Hottentot family. They exceed the Hottentot in the uncouthmess and barbarity of the sounds of which they are composed, but sufliciently resemble it in grammatical structure to shew that they belong to it.

To shew what has already been done towards the formation of a Hottentot literature, we append the following list of works that have been published in the several dialects :-

[^0]small work may prove not only interesting to the curions, but also of practical utility to Missionaries among the Namaqua Hottentot tribes.

## I. ORTHOGRAPHY.

In reducing a barbarous tongue to a written form one of the first and principal difficulties which occurs is the construction of an Alphabet. This difficulty may be the more easily surmounted if it be found that the Roman Alphabet contains sufficient signs to represent all the elementary sounds which compose the language to be formed. In such a case the shortest and easiest method is to avail ourselves of their aid, and, by so doing, obviate difficultics which would arise from the construction of new characters. As the letters of the Roman Alphabet, which are commonly in use among European nations, are merely arbitrary signs, and have, properly speaking, no definite power, except such as may be assigned to them by common consent, we may, until such consent shall have established uniformity in the power of letters, give them such sounds as may scem most proper and natural; being guided, however, as far as practicable, by analogy, and the genius of the language concerned. If it be found that new elementary sounds occur, they will have to be represented by new characters, unless, on the other hand, there be characters in the Roman Alphabet which have no corresponding sound in the language which has to be reduced, when there will be no reason why these should not be appropriated to meet the deficiency of signs which would otherwise occur.

It is on this principle that the orthography of the present work and some manuscript translations has been determined. The Namaqua contains articulate elementary sounds which have no representing signs in the Roman Alphabet, and the latter contains signs which either have no corresponding power in the Namaqua, or may be adequately represented by some of the other characters. It
will be very casy, then, to let those signs which are superfluous with respect to the Namaqua stand for the sounds which are extraordinary and unrepresented. The alphabet of the Kafir language has been modelled on the same principle. C, $Q$, and $X$, have been spared to stand for the clicks which the Kafirs have borrowed from the Hottentots, and $R$ for the guttural which occurs as an elementary sound.

In the absence, then, of any approved Universal Standard Alphabet, as the Roman Alphabet affords sufficient signs to meet the exigences of Namaqua orthography, it would be useless to invent new characters, and the clearest, simplest, and most convenient way would be to confine ourselves almost exclusively, if not entirely, to those which are so readily at command.
'These views have been controverted, and the orthography of those works which have already been published in the Namaqua Hottentot dialect has been based on an opposite view of the question. "The Four Gospels" have signs for the clicks; but although the translation must have been a work of great labour and application, the system of orthography followed by the late respected translator was essentially defective, and consequently the work has never been of any practical utility. "The translation of the Giospel of Suke," is based on a regularly constructed and copious Alphabet, but here also the following signs are employed to mark the clicks-(' ':. ). These, from their similarity to the stops used in composition, and from their being used for that purpose in the same work, can hardly be considered a happy selection. Professor Wailman has adopted nearly the same orthography in the short sketch of Namaqua Grammar which he has prepared. But although this system can thus claim the sanction of precedence as far as the Hottentot dialects are concerned, room is left for a fair trial of the system alrealy sketched, which has in principle been so successfully employed in the Kafir literature.

It would, however, be better that both systems of orthograplyy should give way to an, approved universal Alphabet. The subject of a uniform orthography has recently engaged the close attention of eminent linguists and philologists in Europe ; and among others, Professor Lepsics, of the Berlin University, has proposed an Alphabet which has been very generally adopted or recommended by the great Protestant Missionary Societies of England, France, and Germany, and upon which several works on African languages have already been based. The directors of the Rhenish Missionary Suciety, who are decply interested in Namaqua Missions, have relinquished the system of Knudsen and Wailman, and have instructed their Missionaries to adopt that of Lepsius. The able Professor, in framing his $\Lambda l_{p}$ phabet, has found it necessary to invent now signs for the clicks, and by the aid of these all the elementary sounds of the Namaqua stand clearly represented. Fior the sake of uniformity, as well as on account of other advantages which Lersius' system affords, it will be best to waive all objections and adopt it. In the mean time, however, as considerable delay has already retarded the publication of this small work, and as the requisite type to carry out the system of Lersius in its application to the Namaqua language is not at hand, it has been thought better to proceed with the undertaking at once, and, if it be deemed advisable, to issue another edition in the orthography of the Standard Alphabet, as soon as circumstances will permit. The transposition will be merely a mechanical process.

## LETTERS.

There are twenty-seven letters in the Namaqua Hottentot language, which are arranged as follows:-

Vowcls:-a, e, i, o, u.
Consonants :-b, d, f, g, gh, kh, h, k, l, m, n, p, r, s, t, w, y, z.

Clicks:-c, $q, v, x$.
Letters. Nomas. Powers. ExampleA.

| A | $\Omega$ | ก | 3 A | in | father | ms, ลma. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| E | e | c | 8 | , | may | nep, nes. |
| I | 1 | 1 | i | , | pin | mi, di |
| O | 0 | 0 | 0 | " | bone | qop, >о. |
| U | 4 | 00 |  | " | moon | tu, cnanup. |
| H | b | be | b | , | band | bo, buru. |
| D | d | de | d | " | day ${ }^{\text {- }}$ | dan, danay. |
| E | f | fe | [ | " | far | - - |
| $G$ | G | ge | $g$ | " | go | gus, gâs. |
| Gh | gh | ghe | gult | tura | as in Dutoh. | ghun, ghtar. |
| Kh | kh | khe | decp | p gu | uttural. | khau, khop. |
| II | h | he |  | is | hand | ha, huri, |
| K | k | ke | $k$ | " | keep | kankan, kosi. |
| I | 1 | le | 1 | " | love | - - |
| M | n/ | me | m | " | mau | mit, mari. |
| N | 11 | ne | 11 | " | no | mu, па. |
| P | p | $\rho \mathrm{c}$ | P | " | put | hap, khoip. |
| R | $r$ | re | $r$ | " | run | cara, coro. |
| S | s | sc | 5 | " | sun | soris, subu. |
| T | $t$ | fc | t | " | too | tani, tita. |
| W | w | we | W | " | we | wan, wakhas |
| Y | Y | ge | y | " | ye | -- - |
| $\%$ | $\%$ | tse |  | " | Lats | zu, saz. |
| C |  | 7 |  |  |  |  |
| $Q$ |  |  |  |  | nding sounds. |  |
| $V$ |  | \} | 有 | - | 㖪ing sounds. |  |
| X |  |  |  |  |  |  |

The sounds in the Roman Alphabet represented by f, 1, and $y$ are not found in the Namaqua Hottentot, the characters are, therefore, only inserted to provide for the introduction of foreign words, as:-Faro, Ghalilea, and Yohanip.

The sounds for which $x$ and $v$ commonly stand likewise do not oceur.

The hard and soft sound of $c$ may be expressed when necessary by $k$ and $s$.

A caret $\wedge$ marks the strong nasal accent which ofteu occurs as, -má, té, xná.

## row irs.

The rowels preserve in all places the same radical somed, the only variation being in the act of enunciation. They are long and short. As a gencral rule they are long in accented syllables. All the vowels are invariably sounded. The genius of the language seems to require that vowels should rather be added, for euphony's sake, than elided.

The following examples xvill illustrate the quantities of the vowels:-
a long, as in mas.

short, as in ran.
" ", , ke.
" ", "mari.
" ", " coro.
" ", ", kuru.

DIPH'TIONGS
The Namaqua has the following rather copious list of diphthongs,-ae, ai, au, ei, oi, ou, ui.

Close attention must be given by the learner to the sound of these combinations of vowel sounds, as many nice distinctions depend on their correct pronunciation.

When the rowels which in combination fom a diphthongal sound, have to be sounded separately, the latter of the two is marked by a diæresis, as, -ghoailke, it is written.

Nasal diphthongs take the circumflex over the first vowel, as, -qkâi, qôu.

CONSONANTS.
The Consonants proper to the Namaqua language may be thus divided :-

Labials:-b, p, m.
Dentals:-t, d, z, s.
Palatal:-g, k, h, gh, kh.
Lingual:-n, r.

We are of opinion that $B$ and $P$ are both needed to meet the requirements of the language; this will be seen from the following examples :-

$$
\begin{array}{ll}
\text { berip, bread. } & \text { puitip, a syoat. } \\
\text { khoip, a man. } & \text { buru, to wonder. }
\end{array}
$$

The same may be said of $D$ and $T$, as is crident from the following examples:-

$$
\begin{array}{ll}
\text { dunuis, houcy. } & \text { tani, to carry. } \\
\text { di, to do. } & \text { 领, to ask. }
\end{array}
$$

Gh is a soft guttural, as in the Dutch word guan.
Kh represents a much deeper and harsher guttural than gh. We have no corresponding sound, either in English or Dutch, by which to illustrate its power.

These two letters are simple sounds, though represented by compound consonants. In spelling, they are pronounced at a single articulation, without separating the combined characters; thus ghun is spelt $g h-u-n$, ạnd not $g-h-u-n$. Khap is spelt kh-a-p, not $k-h-a-p$.
$Y$ is only used as a consonant at the beginning of a sentence or word; its vowel sound is represented by the diphthongs $a i$ and $c i$.
$W$ is a semi-rowel, and at the begimning of syllables and words is sounded like the English $w$.

## CJICKs.

The clicks constitute the most peculiar feature of the Hottentot language. The principal, if not the only, difficulty to a European of ordinary capacity and industry, in learning it, consists in these strange and barbarous articulations. They occur so frequently, and form such an important part in the root of many words, that they appear to have become an essential element in the language, and could not be dispensed with unless it were entirely reconstructed.

In pronouncing the click simply by itself, without any supplementary vowel or consonant sound, the breath, instead of being thrown out as is usual with other articnlations of the voice, is checked, or drawn inward, but as
soon as it is combined with any other sound it is strongly ' emitted. It is difficult to speak the Namaqua fluently or intelligibly, until the art has been acquired of checking and aspirating without any pereeptible interception of the breath.

We denote the four clicks which are heard in the Namaqua Hottentot by the characters $c, v, q$, and $x$.
$C$ is a dental click; it is sounded by pressing the tip of the tongue against the front teeth of the upper jaw, and then suddenly and forcibly withdrawing it.
$V$ is a palatal click, and is sounded by pressing the tip of the tongue with as flat a suiface as possible against the termination of the palate at the gums, and removing it in the same manner as for $c$.
$Q$ is a cerebral click, according to the Alphabetic system of Iepsius.* It is sounded by curling up the tip of the tongue against the roof of the palate, and withdrawing it in the same manner as during the articulation of the other clicks.
$X$ is cither a lateral or a cerebral click, that is, it may be sounded cither by placing the tongue against the side tecth, or by covering with it the whole of the palate, and producing the sound as far back in the palate as possible, either at what Lepsius calls the faucal or the guttural point of the palate. European learners almost invariably sound it as a lateral, and hence their articulation is harsh and foreigh to the native ear. A Namaqua almost invariably articulates this click as a cerebral.
In composition the clicks only occur at the beginning of syllables; they combine with all the rowels, and with a certain number of consonants, which are liquid with respect to them. Whilst the anterior part of the tongue

[^1]is engaged in articulating the click, the throat opens itself to pronounce any letter that is to be sounded in combination with the click, and the sound pronounced at the same time with the click gives it a nasal, aspirate, guttural, or other determination.

It is the most natural and proper way to write the click before every other letter. In enunciation the organs of speech first prepare to articulate the click, and any other sound, either vowel or consonantal, is clearly supplementary.

The clicks ought properly to be classed among the consonants, for although they are by themselyes distinct articulations, yet they cannot be considered complete sounds without the aid of a vowel.

The consonants which can be combined with the clicks are $h, k, g, k h, n$.

The following tables will show all the possible click combinations:-
1.

| ca | cc | ci | co | cı |
| :---: | :---: | :---: | :---: | :---: |
| Click and ra | re | vi | ro | vu |
| Vowel. пª | qc | qi | - ๆo | qu |
| -xa | xe | xi | xo | xu |

II.

Click, with
Consonant and Diphthong.
chai ckai - cgai xkhai xmai chac ; and so forth, through all the forms of Tables II. and III.
$W^{r}$ is the only remaining consonant that appears to be at all liquid with respect to the clicks, but when it occurs in combination with a click, it will be better to regard it as a rowel, and write it $u$, as qkua, instead of qkwa. In the Namaqua it is never followed by any other vowel than $a$.

Examples:-

| ca, sharp. ckamsa, hot. cnams, loce. | cî, rect. çâa, poor. $\qquad$ | chamis, a collection. ckhu, to tienble. |
| :---: | :---: | :---: |
| va, to slanghler. viägha, 10 cuter. vou, black. | vi, to cut. vguap, clay. vnú, to sit dorci, | vha, to push. rklia, to oppose. |
| qas, a place. | fit, to hunger. | ghamis, a hunt. |
| gkam, to kill. qua, in. | 'gam, decp. | qkham, to fight. |
| xa, to rash. | xit, to lore. | xha, to chop. |
| xkams, suter. | xgari, to erge. | xkha, to be able. |

By the above examples, any person acquainted with the language will be able to identify the sound which each combination of the clicks and consonants is intended to represent. The distinctions, though important, are, in many instances, very nice, and require a quick car to catch, and a practised tongue to articulate them.

The carct, denoting a strong nasal accent, is often placed over a final vowel, which appears to have the ringing sound of ing, as in ring, sing, \&c., but which is not sounded with sufficient distinctness to warrant our adopting the same orthography as in English. The Universal Alphabet of Lersius, as he proposes to adapt it to the Namaqua Hottentot, will require his $i x$ to mect this case, and his $q$ to represent the deep guttural which we have denoted by kh. With these two additions it will form a basis for a correct, concise, discriminating, and highly intelligible spelling and syllabification for the Namaqua and all its coguate dialects.

## II. ETYMOLOGY.

The words of the Namaqua language admit of the following classification,-Noun, Adjective, Pronoun, Verb, Adverb, Preposition, Conjunction, and Interjection.

This order corresponding with that generally adopted by English Grammarians, is the most easy and simple. The Article, however, properly belongs to the Noun, as will be seen when treating of that part of speech.

## 1. NoLns.-Tifir merivition.

The genius of the Namaqua language affords considerable latitude for the derivation of noms. Nothing is required for this process but to take the root or most convenient part of a word belonging to another class, and affix to it a letter distinctive of gender. Sometimes a particle is introduced between the root and the sign of the gender.

1. We have nouns derived from adjectives, as amap, truth; from ama, true : qkheip, cold; from qkhei, cold.

A more numerous class is formed by adding the particle si to the adjective, with the masculine, feminine, or common terminational sign of the gender; thus from qamu, pure ; qkuri, high; qkhu, rich; vo, narrow; qgam, deep; are formed qanusip, purity ; qkurisip, height; qkhusip, lordship; vosip, narrowness; qgamsis; depth.
?. Many nouns are derived from verbs; these follow the same rule of observing the termination by which the gender is indicated with or without an intervening particle; so from cnam, to love; vei, to think; dan, to conquer ; tanisin, to conduct oneself; musin, to see oneself, we have cnams, love; véis, thought; dansis, victory; tanisins, conduct ; and musinis, a looking-rplass.

For the process of derivation the ront of the verb is employed through all its conjugations. In this service, it is more usual to adopt the feminine than the masculine termination, because, generally speaking, the euphony of the language is most promoted therehy.
3. Participles, which we regard as integral parts of the verb, assist in increasing the number of words which may form the subject of discourse, and thus emrich the language by extending the range of its essential parts; so from mara, seeing; hara, will be coming; and xnaira, singing ; we derive murap, one that sces; harap, one that will come; and xuairap, one that sings. Nous formed in this manner are personal. The Namaqua does not contain any verbal common nouns with a participial termination. Such as correspond in sense with the verbal nouns of the English language are formed in the regular manner from the primitive root of the verb, as ;-ancius, a hearing; ghuas, a writing; qkais, a going: from xnciu, hear; ghua, write ; and $q k i ̂ ́, ~ g o . ~$
4. A few substantives may be traced to prepositions; thus from xaika, between, is formed xaikap or xaikup, the midst; qouka, outside; qoukap, the exterior; qua, in ; quap, the inside.

Compound Nouns may be formed by the combination of two or more simple nouns, an adjective and a noum, a verb and noun, or a participle and noun; as qhu-khaus, an excavation, or a mining operation, from $q$ hup, ground, and khaus, a digging; qyaru-qlup, a wilderness, from qgaru, waste, and qhup; xhhaxkha-aup, a teacher, from xkhaxkha, to teach, and uup, a man; cumi-aup, an heir;
from cumi, to inherit, and aup, a man; hara-aaip, the future; from hara coming, and xaip, time. It will be seen that in all combinations of this kind the letter or particle which denotes gender, is essential to the formation and must constitute the final member of the word.

Proper names are formed from nouns, adjectives, verbs, and participles. Any little circumstance attending the birth of a child, or any peculiar feature in the character, manner, or appearance of an individual, will suggest an appropriate appellation.

Thus we have hatup, from ha, to come; vhharis, from whhari, small ; qkubus, from qkubu, round ; qnoughap, from quoup, red clay ; vkuivnubisavkumtis, one-that-does-not-fear-a-multitude.

## Notis of multitude.

Collective nouns, when only employed in the singular number, take the termination of the feminine gender, as: ukiui-vnubis, a multitude; chamis, a collection or assembly. The feminine form of many nouns is taken in a collective sense, as: xkûs, a springbok; gumas, a cow; vhums, a locust; which severally become, a flock of springbokis, a herd of cattle, and a swarm of locusts. But when a collective noun is put into a plural form it assumes the terminations of the common gender, as,-vkui-vnubin, chamin, rhamn.

## gevder of notws.

In the Namaqua Hottentot we find three genders, the masculine, the feminine, and the common.

These are easily distinguished from each other, for words of the masculine always end in $p$, as khoip, a man; words of the feminine always end in $s$, as khois, a woman ; words of the common always end in $i$, as khoi, a person. There are no deviations from this simple rule.

Except for the names of living creatures which naturally take the termination required by their sex, there is no fixed rule to determine to which gender any given noun
shall belong. The names of things without life may be either in the masculine or in the feminine gender. The only-law which the Namaqua appears to follow in the imposition of gender upon things inamimate is that of euphony, and, in some cases, that which is imposed by a certain distant resemblance or analogy to the natural distinctions of the two seres;-a rule which we observe in English, when, by making the names of inanimate oljects either masculine or feminine, we depart from the literal for the figurative style.

It appears from the classification of words which we have adopted, that the Namaqua language contains no article, but this deficiency is, to some extent, supplied in the following manner:-

The masculine or feminine termination serves to give every noun a definite sense, and the common to make it indefinite; the following examples will illustrate this provision :-

| cap, | the arrow; | vaiz, | au arrow |
| :---: | :---: | :---: | :---: |
| heis, | the tree; | hciü, | tr |
| smip, | the time ; | saiï, | time |
| lihoip, | the man; | Rihoiiz, |  |
| Nihuis, | the woman; | nhor, | a person |

When the sex requires to be particularly shown, the words auri, male, and tarari, female, are often employed. Thus we have,-
auri-khoi, a male person; tararikhoi, a female person.
auri-choï, a male cliild; turari-chüi, a female child.

## Ncmbil of socks.

There are three Numbers,-the Singular, Dual, and Plural. The nominative masculine ending in $p$, changes $p$ into kha in the dual, and ku or ka in the plural, as,hap, the horse; hakha, two horses; leaku or laka, horses.

The nominative feminine ending in $s$, changes $s$ into $r a$ in the dual, and $t i$ in the plural, as,-tgras, the woman; tarara, two women; tarali, women.

The nominative common ending in $i$, changes $i$ into $r a$ in the dual, and na in the plural, as,-gui, a sheep; gura, two sheep; guna, sheep.

Example of the masculine noun cloop, the boy; the feminine noun chos, the grirl; and the common noun ckoï, a child.

| sIng. | dual. | rlural. |
| :--- | :--- | :--- |
| ckop. | ckokha. | ckoku or ckhoka. |
| ckos. | ckora. | ckoti. |
| ckoi. | ckora. | ckoua. |

From these rules there are neither deviations nor exceptions.

## c.ses or nouss.

In enumerating the cases of Namaqua nouns, we shall only specify such a number as seem to be clearly indicated by the difference of termination. This will reduce the forms of nouns obtained by declension to three, viz., -the Nominative, Objective, and Vocative.

A masculine noun ending in $p$, is thus declined:-
sing.
N. Qgap, the servant.
O. Qgaba, the scriant. V. Qgazi, 0 sercant.

DUAL.
N. Quakha, the livo servants.
O. Qgakka, the tioo sercunts.
V. Qgakho, O teo sercauts.
rLCRAL.
N. Qgaku or Qgaka, screants.
O. Qgaku or Qgaka, scriants.
V. Qgako, 0 servunts.
$\Lambda$ feminine noun ending in $s$ akes the following forms:

SING.
N. 'laras, the roman.
O. Tarasa, the roman. V. 'larasi, O qooman.

DUAL.
N. Tarara, the teo women.
O. Tarara, the tico soomen.
V. Tararo, Olco vomiten.

PLURAL.
N. 'luxati, vomen.
O. Tarati, rooimen.
V. 'laraso, 0 roilen.

A noum of the common gender ending in $i$,

SISG. DUAL. ILURAL.
N. Cuii, a stone.
O. Cuiba, a stone.
V. Cuizi, O stone.
N. Cuira, two stoncs.
O. Cuira, two stoncs.
V. Cuiro, 0 hico stones.
N. Cuina, stones.
O. Cuina, stones.
V. Cuido, $O$ stones.

In composition the nominative case often takes the objective form ending in $a$, for the sake of cuphony; thus for zughup ni ha, the night will come, we should say zughubra mi ha.

The possessive is formed by the particle di, which is placed immediately after the nominative form, as :--gauaup di guman. 'The cattle of the chief.

But the particle is frequently dispensed with; thus we should say, gau-aup guman, which is equivalent to,-the chief's cattle

The dative is the same as the objective, as,-qgaba ma. Give it the servant.

When it is necessary to be more explicit the post position qua is employed to indicate the dative case, as,qgaba qua ma. Give it to the servant.

The ablative is formed in like manner by the aid of post positions, which may follow either the nominative or the objective cases, as:-

$$
\begin{array}{ll}
\text { omi qua, in a house. } & \text { amap ckha, with truth. } \\
\text { khoip gla, of the mann. } & \text { quatba vui, out of the light. } \\
\text { qasa glu, from the placc. } & \text { cous diba, at the fountain. }
\end{array}
$$

## dinist tive nouss.

There arc two forms of diminutive nouns, the first is obtained by inserting the particle ro, and the second by inserting the particle da between the root of the noun and the final letter, which marks the distinction of gender, thus:

$$
\begin{array}{ll}
\text { qums, a hand. } & \text { qumdas, a litllc hath. } \\
\text { zaup, a calf. } & \text { zâurop, " litlle calf. } \\
\text { qhumi, a mountain. } & \text { qhumdai, a littlc mountain. }
\end{array}
$$

Example of the declension of a diminutive noun, agharop, the little lad.
sING.
N. Agharop.
O. Agharoba.
V. Agharozi.

DUAL.
N. Agbarokha.
O. Agharokha.
V. Agharokho.

PLURAL.
N. Agharoku.
O. Agharoku.
V. Agharoko.

The diminutive particle rop is more used for persons and things having life, and dap for inamimate objects, though this rule is often reversed in order to promote the euphony of sentences.

Example of a diminutive noun in da, coudai, a little lountain.

SING.
N. Coudai.
O. Coudai.
V. Coudaizi.

DU.iT.
N. Coudaira.
O. Coudaira.
V. Coudairo.
rLURAL.
N. Coudaina.
O. Coudaina.
v. Coudaido.

## 2. ADJECTIVES.

The adjectives of the Namaqua Language resemble those of the English tongue in not being subject to any inflections of gender, number, or case. Whether primitives or derivatives, they invariably preserve the same form.

## DERITATION OF ADJECTIYES.

A large number are primitives, such as, quri, white; vnu, black; cku, near; qkâi, good; .kei, great; vkhari, small.

Many others are derived from nouns. These are formed by affixing the particles gha, or $s a$, to the radical part of the substantive, thus from $x k a m s$, water; qnap, light; cais, fire; cnams, love; we obtain,-xkamgha, watery, or abounding with water; quasa, light; caigha, hot or fiery; and cnamsa, lovely.

Some that are derived from the root of the verb take the same affixes as those which may be traced to nouns, as, burugha, wonderful, from buru, to wonder, cnamgha. lovely, from cnam, to love.

The particitipial forms of verbs are likewise used in the sense of adjectives, as, ditura-xkami, ruming water; nabara-qnaï, shining light; xora-caip, a dying fire. Also, zwa-zwara, beginning, from zwa-zwa, to begin; and xkaura, insipid, from xkau, to spoil. Sometimes nouns are used as adjectives, when placed before other nouns. In this ease the sign of the gender must be elided, as, hei-omi, a wood house; curi-qurip, a metal bowl; gham-qhamis, a lion hunt.

When adjectives are used in the sense of substantives, they take the terminational sign of gender, as, vkham" qua lara lube, I speak to the young. Here the adjective wham takes the letter $n$, which is the sign of the common gender, nominative case, plural.

## DNLVUTIVE ADJECTIVE.

The particle to is joined to an adjective, in order to give it a diminutive signification, in the same way that it is affixed to nouns for a similar purpose; thus, from vol, quai, che, we have vnuro, a little black; qkairo, a little good; and ckuro, a little near.

## comparison of adjectives

Adjectives do not admit of any inflections in order to express the comparative and superlative degrees. The only method in which degrees of comparison can be formed is by employing prepositions or adverbs, such as ghat, of, and $q k a i a$ c above. Although this provision exists, the genius of the Namaqua Language docs not afford equal facilities for the process of comparison as are found in many other languages.

The following examples will illustrate the manner in which the comparative and superlative degrees are expressed:-

1. Ki, great.'
C. Qkia ci ked, more great.
S. Wan glia ki, great of all.

Quai, good.
Qká ci qkiii, whore good.
Wang glen quai, good of all.

1. K゙ei omi, a laige house.
C. Ne omike xua omi gha rga ei kei, this house is more great thon that housc.
S. Xina omi ke wan gha kei, that house is greest of all.
2. Nezi ke ckamsa, to-day is hot.
C. Xari ke qkat ei ckamsa ke i, yestcrtuy ueres nore hot.
S. Nizi ke wan gha ckamsa ke i, the tlay lefore teas hot above all.

Comparisons are often denoted in a general way. Jiist, by adverbs, as,-lecisi, greatly, ama, truly, burughasi, wonderfully; qlihu, rich; keisi qkihu, very rich; lurughasi $q k h u$, wonderfully rich. Second, without any distinctive sign of degree, as,-Yohamip le. qkhu xeip qkeissan qua, John is rich amongst his brethren, i.c.: the richest of all his brethren.

## NUMERAL ADJLCTIVES.

The Namaqua language docs not provide facilities for a very extensive numeration. In fact, counting is a very difficult process for a Hottentot should it ever be carried above a hundred.

We insert the following lists of Cardinal, Ordinal, and Adverbial Numbers.

| ckni, onc. | qnani, |
| :---: | :---: |
| ckam, tico. | lin, seven. |
| quona, llire. | xoluisi, cight. |
| haka, futre. | goisi, vine. |
| kore, fice. | disi, ten. |

The combinations of tens, and also of tens and mits, have to be expressed in the following way, -
ckam disi, quona disi, laka disi, disi disi, cham desi desi, quona disi disi, kei vgou disi, ckam kei vgou disikha, quona kei vgou disik , disi ckui ckha,
tro tens.
thire teils.
four tens.
" hundreel.
tico hundred.
three hundred.
a (housand (or greal rhole ten).
lieo thousand.
thisee thousand.
elecens or lent rill oire.
cisi ckam china, cham disi ckui ckha, ckam disi ckam ckha, disi disi ckui ckha, disi disi ckam disi ckui ckla, kore disi disi, quoua disi, haka ckha, five hundred and thirly-four, or, literally, five ten tens, three ten with four.
In counting cleven, twelve, \&c., the word disi, ten, is often omitted, and then we say ckui ckhat, ckam chha, \&c.

There is only one numeral to express an ordinal adjective, viz., vifuro, first; all the rest are formed by adding. the particle $x e^{i}$ to the cardinal numbers, as, -

| ckam xêi, second. | quani xêi, | sirth. |
| :---: | :---: | :---: |
| qnoua xêi, third. | disi $\leq$ êt, | touth. |
| haka xêi, fouith. | ckam disi x cei, | ticentieth. |
| kore xêi, fifth. | ckama disi ckui ckian xeit, | ticenty-first. |

Adverbial numbers are formed by employing the term quas, turn or time, which being a noun, observes the inflections of number, as,-

| ckui quas, | one time or once. |
| :--- | :--- |
| ckam quara, | tico times or thrice. |
| quona quadi, | threc times or thrice. |
| disi qnadi, | ten times. |

Multiplication may be carried on in the following mamer,-
ckam quara ckui ke ckam, tioice one, sc. ckam quara ckann ke loaka, quoua quadi ckui ke quona, three limes dnc, $\delta \mathrm{c}$. qnona quadi ckam ke quani, quona quadi qnona ke goisi, \&c.

This is the simplest mode of which the language admits, but it will readily be conceived that if the whole multiplication table were worked out it would be exceedingly complex and puzzling to the unpracticed ear of a Namaqua, who has no idea of the elementary rules of arithmetic ; for
instance, twelve times twelve are one hundred and fortyfour, would stand thus,--disi ckam ckha qnadi disi ckam clea ke disi disi zi haka disi zi hake cliha.*

## 3. PRONOLNS.

The pronouns of the Namaqua language admit of the simple and comprehensive classification adopted by many English Grammarians, viz. : Personal, Relative, and Adjective. The last will include Possessive, Interrogative, Demonstrative, and Indefinite Pronouns.

## rensonal plonolns.

These rescmble substantive nouns, in being subject to inflections of gender, number, and case. In the gender of the personal pronouns there are some nice distinctions, which, from their peculiarity in the structure of language, are both interesting and important to philological science. It will be seen, for example, that distinctions of gender are not, as in the dead and nearly all the known living languages, confined to the third person, but that they also extend over the first and second person in all the numbers, except the singular of the first person. 'There are likewise double forms of the first personal pronoun in the dual and plural numbers, which serve to express both an exclusive and inclusive signification. This will be more fully explained below.

To illustrate the manner in which personal pronouns are inflected, we subjoin the following formula, showing the terminations distinctive of gender, number, and case. This will not only prove serviceable in the declension of pronouns, but also in the conjugation of verbs, when it will be seen that the primitive part of the pronoun is often rejected and only the terminational signs of gender,

[^2]number, and case are retained, to show the governing person.

FORMULA OF PERSONAL AFFIXES.
First person:-
Mas.
Shag. $\begin{cases}\text { Nom. } & \text { ta, } \\ \text { Obj. } & \text { tc, } \\ \text { Voc. } & \text { tui, }\end{cases}$
\} ~ T h e ~ f e m i n i n e ~ a n d ~ c o m m o n ~ t h e ~ $\int$ same as the masculine.

Mas.
Dual. $\left\{\begin{array}{lc}\text { Nom. } & \text { hum, } \\ \text { Obj. } & \text { khuma, } \\ \text { Voc. } & -\end{array}\right.$
Plur. $\left\{\begin{array}{lc}\text { Nom. } & \text { kc, kum, } \\ \text { Obj. } & \text { kc, kuma, } \\ y_{o c .} & -\end{array}\right.$
Second Person :-
mas.
Sing. $\begin{cases}\text { Nom. } & z, \\ \text { Obj. } & \text { zn, } \\ \text { Hoc. } & \text { ri, }\end{cases}$
Dual. $\left\{\begin{array}{l}\text { lome. } \\ \text { Oil. } \\ \text { Voc. }\end{array}\right\}$ kibo,
l'ıur. $\left\{\begin{array}{l}\text { Nom. } \\ \text { Obj. } \\ \text { roc. }\end{array}\right\}$,
Third Person:-
mas.
Stag. $\begin{cases}\text { Non. } & \mathrm{p}, \\ \text { Obj. } & \text { ba, bi, } \\ \text { Voc. } & -\end{cases}$
Dual. $\left\{\begin{array}{l}\text { Nom. } \\ \text { Obj. }\end{array}\right\}$ kia,
Plur. $\left\{\begin{array}{l}\text { Nom. } \\ \text { Obj. } .\end{array}\right\}$ kl or ka,

FEM.
s,
sa,
si,
$\{$ ron,
$\{\mathrm{sc}$,

Fry.
s,
sa, si,
$\{\mathrm{ra}$.
$\{\mathrm{di}$,
com.

\} ~ k i a ~ o r ~ r a , ~
\} n ~ i r ~ n a . ~

The personal pronouns are tita, I; sax, thon; xap, he; xếis, she; and xéi, it.

Tita is thus declined :-
mas.
Sing. $\left\{\begin{array}{l}\text { Vom. tita, } I, \\ \text { Olj. tita or ti, ne, } \\ \text { Voc. titai, } O m e,\end{array}\right\}$ same as the masculine.

Mas.
Duat. $\left\{\begin{array}{ll}\text { Nori, } & \begin{array}{l}\text { sakhum, } \\ \text { sikhum, }\end{array} \\ \text { Olj. } \\ \text { sakhuma, } \\ \text { sikhuma, }\end{array}\right\}$ we two.
Pler. $\left\{\begin{array}{ll}\text { Nom. } & \text { sakum, } \\ \text { sikum, } \\ \text { sakuma, }\end{array}\right\}$ we.

PEM.
saim,
siim,
saima,
siima, \}ec tero.

- theo.
- sasi, ?

Saltheum and sakum may be termed inclusive, whilst sikhum and sikum may be denominated exclusive pronouns. The first two include any person or persons addressed, but the latter only embrace the persons speaking, and those spoken of.

Thus, one person speaking to another would say, sakhum ni gkii, we will go ; i.c., you and I will go.

But in speaking of himself and a third party, he would say, sikhum ni qkhí, we will go ; i.e., he and I will go.
$S \neq z^{\prime}:-$
mas.
Sixg. $\begin{cases}\text { Nom. } & \text { saz, thour } \\ \text { Olj. } & \text { saza, thece. } \\ \text { Foc. } & \text { sazi, } \\ \text { O thou. }\end{cases}$
Son. saklio, you tivo
Duti. : Obj. sakho, yout troo. saro, Voc. sakho, O yout tico. saro,
Plur. $\begin{cases}\text { Nown. } & \text { sako, you. } \\ \text { Olj. } & \text { sako, you. } \\ \text { Toc. } & \text { sako, } O \text { you. }\end{cases}$

FEM.
sas, $5 a z$ or sas, sasa, sasi, saza or sasa, sasi, sazi or sasi,
saro,
saro,
sadu,
sadu, sado,

## Xeip :-

mas.
Sivg. $\begin{cases}\text { Nom. } & \text { xeip, he. } \\ \text { Obj. } & \text { xeiba, him. }\end{cases}$
Dual. $\left\{\begin{array}{l}\text { Nom. } \\ \text { Obj. }\end{array}\right\}$ xeikha, $\quad\{$ xeira, $\}$ scikiba or ra,
Plur. $\left\{\begin{array}{l}\text { Nom. } \\ \text { Olj. } .\end{array}\right\}$ xeiku or scika, $\{$ xeidi, $\}$ xcin, xcina.
The Possessive Cases of Pronouns are expressed in the same way as those of Substantives by the aid of postpositions, thus, Tita di, tita gha, of me; likewise the Dative and Ablative, as,-xeiba qua, to him; tita ckha, with me ; saz aghu, from thee, weis osi, without her.

Te-eizama, I myself; sa-eizama, thou thyself; and xei-eizama, he himself, are Compound Personal Pronouns. Except in the nominative case, which has no distinction of gender, they are declined as the examples above.

The nouns aup, man; taras, woman; and khoi, person, would be thus declined in conjunction with the first and second personal pronouns:-

MAS.

Sisg. $\left\{\begin{array}{l}\text { Nom. } \\ \text { Obj. }\end{array}\right\} \begin{aligned} & \text { sa auz, thou man. } \\ & \text { Voc. }\end{aligned}$ sa auzi, 0 thou man. $\left\{\begin{array}{l}\text { sa tarasa, }\end{array}\right\}$ sa karasi, $\begin{aligned} & \text { sa khoiza, }\end{aligned}$
In this mode of declining a noun and pronoun conjointly, the radical part of the substantive is inserted between the root of the pronoun and the various inflections.

The Dual and Plural numbers do not admit of any alteration either of the Noun or Pronoun; thus we should say, sakum-aukum, we men; sase-tarase, we women; sadukhoidu, ye people.

Ti ckuila, I alone; saz-ckuiza, thou alone; xeipckuiba, he alone; te xkhata, I the same, and the like, follow the example just given.
'Io these may be added:-

relative proxotys.
In this class of Pronouns the Namaqua Language is very deficient. 'The only example corresponding to the Relatives of the English tongue is found in the word hia, that.

Hia, which is undeclined, may relate to antecedents of any Gender, Number, or Case, for example :-
khoip hía xari ke ha, taras híu ra xnai, dumi hía ra kuba,
gluu hîa ke maï,

The man tho arriced yesterday.
The woman thio sings.
The voice which speats.
The things that were given.

But although hiat is undeclined in its relation to the antecedent, it takes the personal affixes which distinguish the gender of the noun governing the following verb, as-

| Khoip hiala xari ke mu, | The man whoin I surb yesterclay. |
| :--- | :--- |
| taras hinaz ke rkei, | The woman whom your called. |
| dumi han ke xum, | The woice that they heard. |

The Relative Pronom is, however, frequently dispensed with, and the sense expressed by transposing the members of the sentence. The verb is put before the noun it governs. According to this method the examples above given would stand thus:-

$$
\begin{array}{ll}
\text { xari ke ha khoip. } & \text { xari ta ke mu khoiï. } \\
\text { xnaira taras. } & \text { rkeiz ke taras. } \\
\text { kubara dumi. } & \text { xnaun ke dumi. }
\end{array}
$$

This may be further illustrated by the following translations of Luke vii. 10: "And they that were sent, returning to the house, found the servant whole that had been sick":-
"Ziku xcin hia omichaku ke sihe xkhaba sio, on ke qgaba hia caisin ke hâi vgousi ke ho.

Ziku ke sîhe-keka omichaku ke xkhaba sio, caisin ke haï qgaba vgrousi ke ho.

These two methods appear to be used according to the taste and style of the speaker. The former, however, is more general. The latter may contribute to the conciseness, but not to the perspicuity of sentences. Knüdsen invariably adopts it in his translation of St. Luke's Gospel, whether from its being more in use among the tribes with whom he resided, or from having followed analogies furnished by other languages, I cannot say. In the passage above quoted he has evidently assimilated the translation to the German text as closely as the idiom of the Namaqua would allow.

Pronouns termed in English Compound lelatives are, in the Namaqua, derived from Interrogatives, and will, therefore, fall more properly under that division.

## ADJECTIFE PRONOLXS.

In this class we have comprehended Possessive, Interrogative, Demonstrative, and Indefinite Pronouns. Those termed Distributives, as, each, every, either, neither, have no corresponding words in the Hottentot dialects.

Possessive Pronouns ;
These are derived from the Personals, and, in some instances, exactly correspond with them. The following list incluctes all of them:-

And so forth through all the inflections of Number and Gender. There is another form of possessive pronoun expressed by the particle $a$. To this the various terminations which stand as signs of the Genders and Numbers may be affixed, and thereby all the possessive pronouns will be represented in a convenient and comprehensise manner. The first form of possessive pronouns is derived from the roots of the personal pronouns, and the latter from the inflections.

Examples of nouns and possessive pronouns, qkip, brother, qlicis. sister, and khoi, friend. $^{\text {a }}$

|  | Nas. | FEM. | com. |
| :---: | :---: | :---: | :---: |
| Sisg. | te ghkip | te qkis | te khoi |
|  | $\int$ sakhum qkithha | sasi qkàra | sarum klooikha |
| Dual. | [ sikhum qkikha | sisi qkara | sirum khoikha |
|  | \{ sakum qkâka | sadi q̣kâdi | sada khoin |
| slur. | ¢sikuan qkika | sidi qkêdi | sida klioin |
| Or, - |  |  |  |
| Sing. | qkâp àta | qkâs ita | khoi âta |
| Dual. | qkâkha âkhum | qkîra â3i | khoikha ârum |
| Plur. | qkî̂ka âkum | qkấdi îdi | khoin îda |
| Sing. | sa qkâp | sa qkîs | sa khoi |
| Deal. | sakha qkîkha | saro qkara | saro khoiklıa |
| Plur. | saku qkaka | saso q̧kadi | sadu khoin |
| Or,- |  |  |  |
| Sing. | qkâp Azz | qkais às | khoi ai |
| Juat. | qkîkha âkhu | qkâra âro | khoikha atro |
| Ilur. | qkâka âku | qkâadi aso | khoin âdu |
| Sing. | xêip qkîp | xèis qkầ | xéi khoi |
| Dual. | xêikha qkeikhas | xêira qkâra | xekha khoikha |
| Plur. | xêiku qkika | xûide rakàdi | xçin khoin |
| Or,- |  |  |  |
|  | qkîp îp | qkî̂s is | khoi ii |
|  | qkaikba âkha | qkaira âra | khoikha ithan |
|  | qlaika aiku | qkîdi âdi | khoin in |

According to the first form the pronoun stands before the noun, but in the latter the substantive takes the precedence, thus,-

Te omi, my house, and sa qhanap, thy garden, are changed into omi ata and qhanap $a z$.

Saku tani cuani qna, saliu cumadi whâ, "In your patience possess ye your souls," may be rendered by 'I'mi cnami âku qua, cumdi âku uhà.

Interrogative Pronouns:-
Hami ? who? mai? which? and tari ? what?

From these are formed hamitap-wap, whoever; maii-wai, whichever; and tari-wai, whatever. The two former admit of inflection of gender, as, -

Mas. hamitap-wap. Fem. hamitas-was. Com. hami-tai-wai.

Demonstrative lronouns :-
Ne this; with nou and wna that, are thus declined.

|  | mas. | FEM. | cos. |
| :---: | :---: | :---: | :---: |
| Sing. | ( N. nep | ncs | ncï |
|  | \{O. neba | nesa | neï |
|  | (V. nezi | nesi | nezi |
| Dual. | $\left\{\begin{array}{l}N . \\ \text { neklia }\end{array}\right.$ | nera | nckia |
|  | \{ V. nekho | nero | nekho |
| l'Luß. | $\left\{\begin{array}{l}N . \\ \text { neka }\end{array}\right.$ | nedi | nen nena |
|  | \{V. ucko | nedo neso | nedo |

Noup, nous, nouil, the same as nep.

Snsg. $\left\{\begin{array}{l}N . \text { xnap } \\ O . \text { xuaba } \\ V . \text { xunzi }\end{array}\right.$
Dusl. $\left\{\begin{array}{l}N . \text { makha } \\ Y . \text { makho }\end{array}\right.$
Plur.
xnas
xnasa
xnasi
xnara
xnaro
xnadi
xuado-xnaso

## xnaï

xuaï xnazi
xuaklıa xnakho
xuan
xnako, or xuadu

The Demonstrative Pronouns are only declined when they stand singly without any noun expressed.

## Indefinite Pronouns:-

Such as cni, some ; cni ckui, or cni kumaï, any ; ckiui, one; cnï, other; chhara, another; ghari, none; wan, or wazoma, all ; wakha, both; xnadi, such.

These, like the Demonstrative Pronouns, when standing in conjunction with a noun expressed, are undeclined. E
but otherwise admit of the following inflections of gender:-

| cnip, | cnis, | cniï, |
| :--- | :--- | :--- |
| cni-ckuip, | cni-ckuis, | cni ckuii, |
| ckuip, | ckuis, | ckuii, |
| charap, | ckharas, | chharaï, |
| gharip, | gharis, | gharii, |
| wakha, | wara, | wakha, |
| xnadip, | cmadis, | xuadiï. |

Cnii, wan, and wazoma, are exceptions which have no variations.
4. VEIUS.

In treating of Namaqua Verbs we have to notice their Derivation,-Forms, Voices, Moods, 'Tenses, Numbers, Persons, and Conjugation.

THEIR DERIYITION.
'The roots of verbs in the Namagua Language are found in the second person singular of the Imperative Mood, as:-cnem, love ; mu, see ; qkii, go.

A large class of Verbs consists of primitives. All monosyllabic verbs are of this kind, some of more than one syllable are also included, as, cari, to sprinkle ; qhami, to hunt ; eguri, to pray.

Some are obtained by a reduplication of the radical part of primitive verbs, thus from van, know, is formed van-van, to inform ; from véi, think, vcî-veî, to remember; from kon, move, kon-kon, to disturb.

Others are compounded of two or more different verhs, as, from khâi, to rise, and from $v m$, sit, is cierived, khaii$r m u$, to sit up, from $q k u$, to go, and ma, to stand, is formed qkii-ma, to walk about.

Many are formed by combining a preposition with the root of a primitive verb, thus, from $k a$, come, and vam,
upon, we have ha-vam, to happen; from vkei, call, and vui, out, is formed vkei-vui, to challenge ; from ma, stand, and qua, against, ma-qua, to oppose or resist; from $c u$, to be ignorant of, and $b a$, for, is formed cuba, to forgive.

A few are obtained from nouns by aflixing $r i$ to the radical part, as, from gui, a sheep, is formed guri, to herd; from ckit, grass, ckairi, to graze; from caip, fire-wood, is formed cairi, to fetch wood. $A$ may also be added to the root of a substantive to construct a verb, as from xhams, water, we obtain xhama, to give water, or irrigate.

The reduplication of substantive roots also serves for the formation of verbs, as from quap, light, is formed qua-qna, to illumine, and from qkhup, a lord, qlehu-qkhu, to enrich.

A large number of verbs are also obtained by the reduplication of adjectives, as quri-quri, to whiten, from quri, white; qkâi-ghäi, to appease, from qkaii, good; vou-vou, to tame, from vou, tame; kei-kei, to honor, from kei, great ; ckabi-ckabi, to elevate, from ckabi, high ; qgam-qgam, to deepen, from qgam, deep.

## foriss of verbs.

Namaqua Verbs assume various forms by which their signification is extended irrespective of the regular inflections of Mood, Tense, Number, and Person. The particle indicating an alteration or extension in the sense of the, verb is inserted between its root, and the diflerent signs used in conjugation.

The following forms are found in connection with Namaqua Verbs:-The Primitive, Relative, Reflective, Causative, Reciprocal, Diminutive, Negative, Potential, and Optative.

The Primilice form exhibits the verls in its radical state, and forms the basis upon which the rest are constructed.

The Relative is formed by adding bre to the primitive, as
snâuba, to hear for, from $x$ núu, to bear, mula, to see for, from zin, to see.
$B a$, is equivalent in sense to the preposition for, and hence this form indicates that the action denoted by the verb, has a relative purpose.

The Reflective adds sin to the primitive form. In this form the action is reflected upon the actor; thus

> xniusin, to hear oneself, from rnan musin, to sce oneself, from yine cnamsin, to love oneself, from cnariz

The Causative aflixes leci to the primitive form: kei signifies to cause, and shews that the action of the verb is necessitated, as

> mokei, to cause to see
> xnaukei, to cause to hear
> cnamkei, to cause to love

The Reciprocal is derived from the primitive by adding $k u$, and denotes that the action is performed by two or more mutual actors, thus
xnaulin, to hear oue another muku, to see one another cnambity, to love one another.

The Diminutive is derived from the primitive by adding the particle ro to it, as
xnauro, to hear a little
muro, to see a little cnamro, to love a little.

The Negative form is derived from the primitive by adding dama to it, thus

$$
\begin{array}{ll}
\text { snâudama, } & \text { not to hear } \\
\text { mudama, } & \text { not to see } \\
\text { cuamdaiza, } & \text { not to love. }
\end{array}
$$

The Potential is formed from the primitive by affixing to it xkha, to be able. This form stands instead of a Potential Mood. It ranks more properly as a form than as a mood, since it corresponds with the other forms in standing before and not after the pronominal affixes, thus,
xuntuatha, to be able to hear
muxtilit, to be able to see
cuamkia, to be able to love.
The Optative form adds whan, to wish, to the primitive. It may be considered a form for the same reasons as the Potential, thus
xnâuvkan, to wish to hear
muvkar, to wish to see
cuamokau, to wish to love.
From the above simple Derivative forms, some compound forms may be obtained.

The Relative and Reflective are often combined, thus,
xnâubasin, to hear for oneself mubasin, to sce for oneself cnambasin to love for oneself.

To these may also be joined the Potential and Optative, thus,
muxkhabasin, to be able to sec for oneself xnturkaubasin, to be able to hear for oneself.
To the above the Negative may be affixed, as
xnâubasin, not to hear for oncself xuturkaubasindama, not to wish to hear for onesclf.

The Reciprocal and the Negative, and the Reciprocal and the Optative, may also be combined, as
xnafukudama, not to hear one another
mniukurkan, to wish to hear one another.

It will be shewn below to what extent these forms run through the various moods and tenses in conjugation.
voices of terbs.
The Primitive forms of Verbs have two voices, the active and the passive. The passive voice is formed by addling he to the radical part of the active, as

$$
\begin{aligned}
& \text { xoaulhc; to be licard, from xuỉu } \\
& \text { mu } h i ; \text {, to be scen, ", mu } \\
& \text { cuam } h c \text {, to be lored, ", cuan }
\end{aligned}
$$

'The Causative, Diminutive, and Negative forms are also found in the passive voice, thus,

$$
\begin{array}{ll}
\text { xnaukeihê, } & \text { to cause to be heard } \\
\text { nurohê, } & \text { to be secn a little } \\
\text { cuambêdama, } & \text { not to be loved. }
\end{array}
$$

The remaining forms are generally confined to the active roice, though there is nothing in the genius of the Namaqua Language to prevent their being conjugated passively should the sense of discourse require it.

> moods.

There are four moods, the Infinitive, Imperative, Indicative, and Subjunctive. The definitions generally given of these moods in English Grammars will fully explain their nature in Namaqua Grammar.

The Infinitive is used to express a thing in a general mamer.* It contains the Present, Perfect, and Future 'Tenses.

The Imperative commands, exhorts, entreats, or permits. The Indicative simply declares a thing.
The Subjunctive represents a thing under a condition, supposition, motive, or wish.

* Tle particle se is often required to assist in its formation.

The T'enses of a Namaqua Verb are the Present, P'ast, Perfect, Pluperfect, Future, and Future Perfect.

The Present Tense represents an action in a state of progress. It may also be used as in English and other languages in a general sense, without allusion to any particular time.

The Past 'Tense represents an action either as completed or in a state of progress, at some time past.
'The Perfect Tense represents an action as completed at the present time.

The Pluperfect 'Tense represents an action as completed previous to some other past event.

The Future Tense represents an action as yet to come.
The Future Perfect represents an action as about to take place subsequent to some previous event or action.

The 'lenses are formed by the help of the Substantive Verb.
'Ihe 'Tenses of the Substantive Verb are as follows:-

| Pums. | a, ke, ke-a, |
| :---: | :---: |
| l'ast | ke, keke, |
| Jxur. | ko, |
| J'luft. | kc, ko, |
| Fut. | ni, keni, |
| Fut. Per | nilai, ke-mi-hâ |

A, ke, ke-a of the Present; keke of the Past; kemi of the Future, and lee-ni-hit of the Future Perfect, are forms not used in the conjugation of Tenses but in the construction of sentences, and when the substantive verb is employed separately.

## ntaber.

Verbs have three numbers, the Singular, the Dual, and the Plural. The number is not distinguished by any
inflection of the root of this verb, but by the governing noun or pronoun. In the case of pronouns governing, the number is indicated by remmants of the personal pronouns I which are usually inserted between the rerbal root, and the particles of the substantive verb, thus,

$$
\begin{array}{ll}
\text { mulara, } & \text { I sec } \\
\text { mukiumra, } & \text { we sec. }
\end{array}
$$

persons.
There are three persons in the Conjugation of a Namaqua Verb. 'These, like the numbers, are only distinguished by the substantive or the governing pronoun, the radical part not being subject to any variation.
conjlig.tion.
Under this head examples will be given of the mamer in which verbs pass through the Forms, Voices, Moods, 'lenses, Numbers, and Persons.

Conjugation of the verb hd, to be.
infinitive.
Pres. hit, to he
Perre. hâko, to have becn
Fuv. bâni --
participles.
Pres. hâra, being Perf. hairako, having becn Fur. hâuira,

$\left.\begin{array}{r}1 \text { cnamkera } \\ \text { cuamsera } \\ \text { enamdara }\end{array}\right\}$ we lore

3 cn
cuamnta
thay love cuamnta

I looe
Thon lovest
Ifc loves
She lores
It lores.

Dusat.
1 cnamkhumhâ ? cnamimhat $\}$ we are loving cuamrumhâ $J$
$\left.2 \begin{array}{l}\text { cuamkhohat } \\ \text { cuamrohà }\end{array}\right\}$ ye are loving
3 cuamkhahat cuamrahâ $\}$ they are loviny

Plur.

2 cuamkohá cuamsohà \}ye are loring cuanduhà
3 clamkuhâ cnamdihâ cluamuhâ

The pronouns and particles may be placed before the root, thus,
tara coam, zra cuan, pra clam, \&e. Transitive.
Past cuamtake
Perf. cmamtako
Pruperp. cnamtakcko
Fur. cuamtani
Fut. l'err. cnamtauihâ.
Intranstive.
PAST cnamtakchî̀
Perf. cnamtakohit
Plurerf. camakakehai
Fut. cnamtanihâ
Fut. Perr. camatanihâhâ.
The above Tenses of the Indicative Mood, are all conjugated in the same mamer as the Present.
subjunctive mood.
Sigess ku, kai, kiuo.
Present Tense.
Trasitine Fonar.
Intransitive Form.
Sivg.

| matak | love | 1 cmamtakalâ | If I be loving |
| :---: | :---: | :---: | :---: |
| 2 enamzka cnamska | If thon lovest | 2 cuamzkabâ | If thon be locing |
| cnampka cuamska coamika | If he love <br> If shi lore <br> If it loce. | 3 cuampkahâ cnamskahat cnamikahâ | If he be lowing If she be loving If it be loving. |

The Dual and Plural Numbers are conjugated as in the Indicative Mood.

| Past. | cnamtakekit |
| :---: | :---: |
| Perf. | cammakokù |
| luperf. | cuamtakckokâ |
| Fur. | cnan |
| For. Perp | cnamtanikahâ |

The Relative, Reflective, and other forms of Verbs, are conjugated in the same manner as the Primitive; thus, cnamba, to love for, forms in the Present Tense, -

Sing.
1 cuambatara $I$ lorc for
$\left.\begin{array}{r}2 \text { cnambazra } \\ \text { cnambasra }\end{array}\right\}$ Thoul lorest for
3 cnambapra ITe loves for
cuambasra She loves for
coambaira It loves for.

In the Reciprocal form the conjugation is necessarily confined to the Dual and Plural Numbers.

The Negative form is irregular in some of its Tenses.
The infinitive Mood with the Present, Past, Perfect, Pluperfect, and Future Perfect of the Indicative and Subjunctive Moods, are conjugated regularly. The exceptions are as follow:-

The Imperative Mood forms its negative by prefixing $t a$ to the first and third person, and titi to the second person, as

> ta îta cuana, let me not love ta ip cuain, let him not lore cnainatit, thou shalt not love.

The Future Tense forms its negative by substituting liti for $n i$ and dlama, as

> cnamatatiti, I will not love
> cuamztiti, Thoon shall not lore cuaraptili, He woill not love.

The Future Perfect also admits of being expressed in a similar manner, as

> cnambâtatiti, I scill not have loved.

When the object upon which the action of a verb terminates is represented by a substantive, then it may be placed either before or after the verb by which it is governed, as

> Eloba tara cnam, I love Cod Cnamtara Eloba, " "

But when it is.represented by a pronoun, the inflected part of the pronoun is joined to the root of the verb, so as to stand before the nominative pronoun, thus,

$$
\begin{array}{ll}
\left.\begin{array}{l}
\text { cnamzitara } \\
\text { cnamsitara }
\end{array}\right\} & \begin{array}{l}
\text { I love thee } \\
\text { cnambitara }
\end{array} \\
\begin{array}{l}
\text { I love him. } \\
\text { cnamsitara }
\end{array} & \begin{array}{l}
\text { I loce her. } \\
\text { cuamitara }
\end{array} \\
\text { I love it. }
\end{array}
$$

## PLSSITH: VOTCR.

Stgi he
INEINITIVE MOOD.
l'aes. cmamhề
Prery. cnamhêko
Fut. cnamlêni.
PARTICIPLES.
Pres. enamhêra
Perf. cnamhéralat
Hut. cnamhênirahâ.
TMPERATIVE MOOD.
ida cnamhê, let me be looc
cnamher, Lethou lowed
it cuamhê, let him be loced.
and so forth as in the Active Voice.

> INDICATIVF MOOD.
> Presche Tense.
> Sug.
> 1 cnamhêtahâ I an loved
> $\left.\begin{array}{r}2 \text { cnamlêachat } \\ \text { cnamhêshâ }\end{array}\right\}$ Thou art loced
> 3 cnamhêphat ITe is loved
> cuamhêshâ She is loved
> cnamhê̈ha $I t$ is loced.

The Dual and Plural Numbers are the same as in the Active Voice, hé being inserted between the theme and its inflections.

| Past Texse | cuambêtake | I ras loved |
| :---: | :---: | :---: |
| Perfect | cnambêtako | 1 hare been lared |
| Plupehr. | cuambêtakeko | I had becn |
| Futura | cnamhêtani | $I$ shall be |
| Future | cnauncétavila | I shall hure been lored. |

subjusctue: Moob.
Pires. Tense cnamhétaka ff $l$ be loved. And so forth through the remaining tenses.

## MPERSOXM, VERHS

Impersonal Verbs correspond with the third person singular of the various tenses, as,-cabiüra, it rains, cabïnira, it will rain, \&e.

The remaining parts of specel comprehending Adverbs, Prepositions, Conjunctions, and Interjections, being undeclined, it will suffice to append lists of those most commonly in use.

## 5. ADTBRBS.

Adverbs of mamer, which constitute a large class in the Namaguat Language, are chiefly derived from Adjectives. They are formed by affixing the particle si to the root of the Adjective as, ama, true, amasi, truly; row, slow, vousi, slowly ; qkai, good, qkâisi, well.

ITST OF ADYERBS.

| n, | yes | ckui-ckuisi, | singly |

## SPECIMENS OF TR.LNSI.ATION.

## Leke in. 1.

1. Zịp ke disi-ckam-ca qgaku âba ke vkei-chû, zì wa

Zip. And he. The pronominal remmant joined to the conjunction. The same arrangement would be observed if cither the noun or the pronoun were expressed in full. In that case they would be in apposition with $p$, and would be put in the oibj. case after the substantive verb : thus,-" Zip ke Jesiha," \&e., or, "Zip, ke xeilia," $\& c$. If the sentence were in the sul)junctive mood, the substantive verb would be onitted, and the nominative pronoun affixed to the possessive, thus,- " $Z i$ disi-ckam-ca qyaku äbap ke velei-chio," \&c. The subject in an affirmative sentence is placed as near the begiming as possible. Nouns placed in apposition take the obj. case.
ke. The past tense of the substantive verb, used here as a temporary predicate. When ke is employed in this way, the verb to which it refers is put near the end of the sentence, as,—Qkhup le Mosip qua te mi. "The Lord said to Moses." Knüdsen places $p$ and tee in the second member of the sentence. 'This does not aecord with the usare of the Namarqua limguage, which seems to require that the sulject and predicate should stand promincutly forth.
disi-ckam-ca. laelve. A numeral adjective undeclined. Adjectives are gencrally placed immediately before the nouns they qualify, as ;-qkiku khoip, a rich man; qum leeis, a green tree. qgaku, servants or clisciples. A nom, mas. gen. plur. obj., governed by the verb viei-chu.
âba, his. Poss. pron. abbreviated terminational form,-see page 32. Obj. case agreeing with ggalu. Another form would be xeit disi-cham-ca gyak", in which the pronoun appears in full. Or a preposition, di, of, might be introduced, as,xfip di disi, \&c. The mode adopted in the text is, however, the most elegant and concise.
xkâuaku vama gaus zi cgciba ke maku, zi caisinhân fini rgou-rgouse.
2. Zìp ke ke sî-vuiku, Elob gau-qhuba ku ni au xna, zî caisinhâma vgou-vgou-ka.
ke vkei-chû, called logether. ke, sign of the past tense, vkei-chui a compomid verb, from rkei, to call, and chii, together. Active voice. ludic. Past. Sing. 3rd person governed by the pronominal remnant $p$.
$z \hat{i}$, and, copulative conjunction. Ifere a repetition of the pronown is not required.
wa, all, alj. pron. Standing in conjunction with a nom, and therefore undeclined. See page 33.
xkîunku, devils, n. mas. pl. nom.
vama, over, prep., governs the nominative case. All prepositions are placed immediately after the nouns or pronouns to which they relate, as ;-qhumi ei, upon a momutain; qusa-ylu, from the place.
gaus, uuthority, n. fem. sing. nom.
zî cgeiba, and poreer, in. mas. sing. obj. When two noms arc joined by a conjunction and followed by a verb, the first is put in the nominative and the latter in the oljective case.
ke ma, gave. Yerb. Active. Indic. P'ast, sing. 3rd pers.
ku, theng. third pers. pron. affix. plur. mas. olj. Sce page 2 G. titu is the form employed as a dative. Being the object upon which the action of the verl) terminates, it is affixed to the root of the rerb. Sce page 45 .
zì caisinhân, and them that are sick. nom plur. com. gen. obj. governed ly vyou-ryou.
Anni. that they. $\hat{\pi}$ is equivalent to the conj. that; $n$ is the pronominal remmant 3 rd pers. com. gen. plur. nom.
vgou-vgou se. might heal. rgou-vgou formed from ryou, whole, prefect. Act. subj. fut. plur. 3 pers. Ni is the sign of the future, there being no pronominal affx, it is placed before the verl).
Zìp ke ke silvaiku. And he did scind out them, $P$ the pronominal
3. Zîp ke xêiku qua ke mi, 'Ta ghuï daup ei qkû-u, heii kai, kô̂ï kai, berii kai, marii kai; zì ckuií âku ghariï ckam ana-vam-grkukha ni uhâ.
aflix, is the nominative to the whole verse. Ke the temporary predicate is often followed by the verb itself. Si-vui, a compound verl), from si to send, and rui, out. Act. Indic. past. 3 pers.
Elop. Good. n. sing. nom. mas. A forcign word formed from the Hebrew. Introduced to supersede the term Zui-wioup, literally sore knee, by which the Namaqua God, "Iteilje Ľip," was designated.
gan-qluban. Kimglom. n. sing. mas. obj. The possessive case is generally expressed in this way, by placing two nouns in conjunction, the possessor being put before the thing possessed. The former must be in the nom. case, the latter may be either nom. or olij. When the possessor is represented by a pronominal affix, the order is reversed, as;-qgaku äba, his servants, as in the previous verse.
kn, they. pers. pron. affix, plur. nominative to the verbs an-xum and ryou-rgou.
ni au-xna, shall preach. ai is the sign of the future tense. an rna compounded of an to throw, and :xa, off, hence to throw off or preach.
7ì caisinhâna, and then that are sick, or, taken as a participial noun, the sich, the participle caisinhtu, being sick, is changel into a noun by adding the personal aflixes, as caisinhtip, caisinhus, caisinhtüi.
Thus caisinhaina is the plur. com. gen. obj. governed by ryou-rgor. vgou-vgou-kia, that they might heal. ka sign of the subj. mood. When two verbs in the future subjunctive, occur in the same scontence, the sign of the future tense is prefixed to the former, and that of the subjunctive mood to the latter.
Tip ke, and he did.
Xeiku them. 3red pers. pron. mas. plur. obj. goverued hy qua, qua, lo, governs an olj. case.
4. Zî tari omi wai qua ku ka rkti, xmaba hâ, ê xmaba ghu qkû-vua.
5. Zì qkho-quaku dama kaina, ku keni xna qasa ghu
ke mi. said, verb. act. transitive form, Indic. past tense, sing. 3rd pers. govened by $p$. in zîp.
Ta, do nol, sign of the imperative mond, forbids, or entreats, and always stand at the begriming of a sentence;-as Ta ruali di, do not do so; T'a ída cliama musi, do not let me see you a second time.
ghuï, a thing. n. com. gen. hence indefmite.
daup ei, on the road. ei, a prep. governs the nom.
qkû-u. lake along. formed from qkit to go, and $u$, to take, Imperative mood. pres. plur. 2nd pers.
heï̈ kai. achether staff. kai from ke whether or if, with the personal affix $i$ to agree with heii. When used in this way it always takes the personal affixes, as
khoip kap, khois kas, kikoï kai, whether man, or woman, or child.
kuiï kai, beriï kai, or knife, or bread, \&e.
zî cknï̀ t̂ku, and one of you. ckni, numeral adj. undec. älu, possessive pron. aRix. sec page 32.

to rub against anything.

FEB 41929

[^0]:    " $A$ IIottentol Cutcchisin," by Dr. Van der Kemr, in the Hotientot proper.
    "The Four Gospels," by the Rev. П. Scimplen, , In the
    "The Goospel of Lulte," hy the Rev. C. H. Knudses, $\}$ Namaqua
    "Ontline of Ifottentot Gramiaur," by Prof. Wailman, Hottentot.
    "A Coranna Cutechism," by Rev. Mr. Wuras.
    Appleyard's Work on the "Kafir Language" also contains an outliuc of the Grammar of the Coranna Language, by Rev. Mr. Wuras.

    It appears that the most has been effected in the Namaqua Hottentot dialect, and as that is still extensively spoken, and the Rhenish and the Wesleyan Missionary Societies are vigorously prosecuting their labours in Namaqualand, it is probable that Scripture translations will continue to be made in that dialect. It is hoped that this

[^1]:    * "Cerebral was the original English denomination, which arose, indecd, from a false translation of the Indian name mirddanya, i.e., letters of the dome of the palate, but bas not yet been supplied by a more appropriate one.-(Nole to Lepsius, p. 45.)

[^2]:    * The guttural is often omitted in clilin, and the word sounded simply as $c a$, by which much of the asperity of the pronuuciation is taken off.
