The South African College for Teacher Education (SACTE) was established on 1 March 1996. This was the result of a merger between the College of Education of South Africa (CESA) and the College for Continuing Education (CCE).

SACTE is a national distance education college.

RHODES UNIVERSITY

Where leaders learn

RHODES UNIVERSITY offers conference delegates the opportunity to meet in gracious buildings set in lovely grounds. Away from the rush of the big city, delegates are able to relax and concentrate on the matter in hand.

- Fully equipped conference venues seating from 10 to 500 people
- Comfortable accommodation in single rooms with full board during university vacations
- Easy access to beaches and game parks
- Within walking distance of historic Grahamstown, banks and shops
- Centrally situated between Johannesburg, Cape Town and Durban
- 120 kilometres from Port Elizabeth airport
- 24-hour reception and security
- Well equipped sports centre
- Braai areas
- Special rates for student groups

Thousands of visitors to the National Festival of the Arts are accommodated at RHODES UNIVERSITY each year

Where an accident or emergency is associated with an injury, a Medical Practitioner or Paramedic should immediately be alerted. Until help arrives the following should be done:

1. Bleeding

- If external bleeding occurs, keep the patient quiet and calm. First treat the bleeding, then investigate the possibility of a fracture. If a fracture does not occur on a limb, lift the bleeding portion higher than the heart. Do not give the patient any liquids to drink. Apply pressure to the wound by means of a pressure dressing and get medical help urgently. Cover the wound with a clean gauze dressing.
- In the case of internal bleeding no liquids should be administered. Consult a Medical Practitioner or Paramedic urgently and get the patient to the nearest emergency unit. Maintain body temperature by covering the patient with a blanket.

2. Bone Fractures

Keep the patient motionless while waiting for help. Apply a splint to both sides of the limb and take care not to force the limb into a straight position. If the skin is lacerated above the area of the fracture, the wound should be covered with a sterile dressing. If bleeding occurs, treat as in 1 (a). Patients with neck or back fractures often display a lack of breath or cardiac arrest. Maintain life functions, but do not in any circumstances bend the neck backwards or turn or lift the patient. Handle the patient as in 4. Obtain urgent medical attention.

3. Burns and Scalds

In the case of minor burns, rinse with cold water. Do not apply anything on wound (e.g. egg-white etc.). Do not prick blisters. Cover wound with sterile dressings, keep the patient warm and consult Paramedics or a Medical Practitioner.

4. Head Injuries

Treat external head bleeds but never move the neck in any way. If vomiting occurs, turn the patient's entire body onto its side without moving the neck at all.

5. Fainting and Sunstroke

Remove the patient to a cool environment where there is fresh air. Loosen constricting clothes. If breathing stops, apply artificial respiration. Cool the entire body with a fan. Get specialised assistance as soon as possible.

6. Electrical Shocks and Lightning

Immediately switch off the power. Ensure that the scene is safe for you. Keep the patient quiet. If necessary, apply artificial respiration and massage the heart. If burns occur, treat as described in 3.

7. Drowning

Turn patient on his stomach, with legs in a higher position. If spontaneous breathing does not occur, apply mouth-to-mouth resuscitation. If no central pulse can be felt, massage the heart. Dry the patient and warm his body with blankets. Get specialised attention without delay.

8. Eye Injuries

Cover both eyes and let the patient lie on his back. Under no circumstances should the eye be rubbed if a foreign object is lodged inside. If contact with corrosive substances has occurred, the patient's eye should be rinsed with water if possible. Specialised assistance should be obtained as soon as possible.

Waar 'n ongeluk of noodgeval met beseering gepaard gaan moet 'n Geneesheer of Paramedikus onmiddellik ingeroep word. Totdat hulp opdaag, moet op die volgende gelet word:

1. Bloeding

- Indien bloeding **uitwendig** is, hou die pasiënt rustig en kalm. Behandel eers die bloeding, daarna 'n moontlike gepaardgaande fraktuur. Indien dit 'n ledemaat is en geen gepaardgaande fraktuur is teenwoordig nie, lig die bloeiende deel hoër as die hart. Geen vloeistowwe moet gegee word om te drink nie. Oefen direkte druk uit op die wond deur middel van 'n drukverband en verkry dringend mediese hulp. Bedek wond met 'n skoon gaasverband.
- In die geval van **inwendige** bloeding moet geen vloeistowwe gegee word nie. Raadpleeg 'n Geneesheer of Paramedikus dringend en kry pasiënt by die naaste ongevalleefdeling. Handhaaf liggaamstemperatuur deur pasiënt te bedek met 'n kombers.

2. Beenbreuke

Terwyl op hulp gewag word, moet pasiënt doodstil gehou word. Plaas 'n spalk op elke kant van die ledemaat en moet nie die ledemaat reguit forseer nie. Bind dit in daardie posisie vas. Indien die vel geskeur is oor die area van fraktuur, moet die wond met 'n steriele verband bedek word. Vir bloeding: Behandel soos in 1(a). Asemnood en hartstilstand kom dikwels by nek- en rugfraktuur pasiënte voor. Handhaaf dus lewensfunksies, maar moet onder geen omstandighede die nek agteroor buig of pasiënt oplig of draai nie. Hanteer pasiënt soos in 4. Verkry dringend mediese hulp.

3. Brand- en Skroeiwonde

As brandwonde gering is: Spoel af met koue water. Moet niks op die wonde aanwend nie (bv eierwit ens.). Blase wat vorm moet nie ooggesteek word nie. Bedek die wonde met steriele verbande, hou die pasiënt warm en raadpleeg Paramedikus of 'n Geneesheer.

4. Hoofbeseerings

Behandel uitwendige bloeding van die hoof en moet onder geen omstandighede die nek beweeg nie. Indien braking voorkom, moet die pasiënt op die sy gedraai word as 'n eenheid en sonder beweging van die nek.

5. Floute en Sonsteek

Verwyder pasiënt na 'n koel plek met vars lug. Maak stywe kleres los. Indien asemhaling ophou, pas kunsmatige asemhaling toe. Koel die hele liggaam af met 'n waaiër. Ontbied so gou moontlik gespesialiseerde hulp.

6. Elektriese Skok en Weerlig

Skakel onmiddellik die krag af. Maak die toneel veilig vir jouself. Hou die pasiënt stil. Pas kunsmatige asemhaling en hartmassering toe soos nodig. Indien brandwonde voorkom, moet dit soos in 3 behandel word.

7. Verdrinking

Draai pasiënt op sy maag, plaas bene hoër. Indien nie spontaan asemhaal nie, pas mond-tot-mond asemhaling toe. As geen sentrale pols het nie, moet hartmassering toegepas word. Droog die pasiënt af en verwarm die liggaam met kombers. Verkry onmiddellik gespesialiseerde hulp.

8. Oogbeseerings

Bedek al twee die oë en laat pasiënt op sy rug lê. Moet onder geen omstandighede die oog vryf indien daar 'n vreemde voorwerp in die oog is nie. As moontlik, moet die pasiënt se oog met water gespoel word, wanneer korrosiewe stowwe in die oog gespat het. Gespesialiseerde hulp moet so gou moontlik verkry word.

Wood J.C. 1827-1889

Natural History

12:00

Blackwood 1889

12:30

Wood's works were in so far as
sense scientific, and are not to be
regarded by the standard executor
in modern scientific research.

13:00

13:30

He was least successful in those works
in which a systematic treatment of
the subject was imperative, and was
himself conscious of this shortcoming.

14:00

14:30

For all that he made any attempt at
fine writing, his style is object
throughout, long to popularise
the study of natural history by
rendering it interesting to and intelligible
to a more scientific mind.

15:00

15:30

16:00

[More successful - naturalist
unimpaired - good effort to
write but more charged.
